Customizable

Always On Duty

Intense Visual Alerts

EDGESAFE® PEDESTRIAN AWARENESS SYSTEM (EPAS) *REDUCE ACCIDENTS BY COORDINATING PEDESTRIAN AND FORKLIFT TRAFFIC*

The new EdgeSafe® Pedestrian Awareness System uses intense, attention-grabbing LED lights to alert forklift drivers to the presence of pedestrians whenever someone activates the light beam sensor by walking past. This system is both effective and flexible, making it easy to incorporate into existing gate and safety railing setups via multiple configurations. It can be as simple as an individual post with a light beam or as complex as an archway with remote light sensors.

EdgeSafe® Pedestrian Awareness System Benefits

- **Increase Safety By Controlling Pedestrian Traffic** – When someone enters the area where a forklift is working, strategically positioned LED lights catch the operator’s peripheral vision, alerting them to slow down or stop.
- **Hard To Ignore, Easy To Live With** – By alerting everyone involved when an accident is possible, productivity suffers less from uncertainty and downtime.
- **Customizable, Modular Design is Easy To Employ** – The EdgeSafe Pedestrian Awareness System is made to adapt to your plant’s unique environment (instead of the other way around).
- **As Simple Or Complex As You Need It To Be** – The EdgeSafe Pedestrian Awareness System can be as simple as an individual post with a warning light beam or as complex as an archway with remote light sensors.

The Pedestrian Awareness System is compatible with these PS Safety Access™ products:

EdgeSafe®
Safety Railing

EdgeSafe®
Personnel Access Gate

EdgeHalt®
Ladder Safety Gates
